

AI Powered Workflow Training Workshop Session 01

2026.01.14

Takao Umehara
CX Design

**What is the value of design
and designer in age of AI?**

A product designer's value is shifting from manual execution to strategic curation, where they act as the essential 'pilot' who applies human empathy, taste, and critical judgment to guide AI-generated outputs toward meaningful user experiences.

Summary from article written by
Andrew Hogan, Insights at Figma

From Listening to Solving:

Optimizing the CX Product Team Workflow

Innovation starts with empathy—not just for our customers, but for our own team.

In late 2025, I conducted deep-dive interviews with 16 designers to map their reality. I wanted to look beyond the deliverables and understand their world: the creative process, the daily hurdles, and the friction points impeding their velocity.

The insights were critical, highlighting exactly where operational drag is stifling creativity. We are now translating those findings into a new toolkit. By leveraging AI to solve the specific struggles voiced by the team, we are building a workflow that empowers designers to spend less time on process and more time on design.

Quantifying the Friction: The “Heat Map” of Our Design Process

We didn't just collect feedback; we measured it.

By categorizing the 16 interview transcripts, we identified over 40 distinct friction points and ranked them by Severity, Business Impact, and Ease of Change.

ID	Category	Friction Point (The Symptom)	Description	Severity (1-10)	Business Impact (1-10)	Ease of Change (1-10)	AI Opp. (1-10)
1	Strategy	The "Pre-Discovery" Black Hole	10	10	1	9	13
2	Validation	Designing in the Dark (Data Void)	10	9	3	9	12
3	Dev	The GTS "Wall" (Misalignment)	10	10	2	7	11
4	Strategy	Prescribed Solutions ("Pixel Pushing")	9	8	6	8	7
5	Ops	No "Single Source of Truth"	7	8	9	10	7
6	Tools	Lack of Dev Mode Access	8	10	9	9	6
7	QA	VQA / Environment Instability	8	8	4	5	7
8	Definition	Designing Without User Stories	9	9	3	8	5
9	Definition	The "Million Use Cases" Trap	6	7	8	9	5
10	Collab	XM as Gatekeeper	6	6	3	3	6
11	Strategy	The "Launch & Forget" Cycle	9	9	2	6	6
12	Tech	Legacy Tech Debt	7	7	1	2	4
13	Process	Lack of Prototyping	7	5	5	8	4
14	Collab	Leadership Misalignment	7	6	3	1	3
Sp	Ops	Lack of Design systems Documentation	7				
15	Culture	Lack of Peer Critique	4	5	7	4	3
16	Culture	Contractor Exclusion	4	4	6	1	3
17	Ops	Inconsistent File Hygiene	3	4	9	9	2
18	Tools	Asana/Jira Disconnect	3	3	6	5	2
19	Culture	Workload Imbalance	5	6	4	2	2

[Friction Details in Google Sheet](#)

Designers' Frictions

1. Tribal Knowledge Trap

Critical business logic, project requirements, and institutional knowledge are currently fragmented across emails and "tribal knowledge" rather than a centralized repository, leading to costly inconsistencies, rework, and the loss of essential product intelligence when staff depart.

2. Late-Phase Discovery and rework

Delayed technical discovery and a lack of early SME collaboration mean critical edge cases are only identified post-handoff, forcing emergency rework and disrupting the design process.

3. Designing in the Dark

Without dedicated budget or timeline for user testing, designers are forced to rely on the subjective, unfounded opinions of stakeholders rather than validated data, leaving no objective way to justify design decisions or prove their effectiveness.

4. Strategic Design Compression

Constant pressure for rapid delivery forces designers into "pixel pushing" roles, sacrificing the deep psychological and cognitive rigor required to act as strategic partners rather than just production resources.

Past Workflow in our organization

New Workflow with AI tools

Single Source of Truth

Master Brain

The “Project Master Brain

What it is

A single, centralized, and constantly learning knowledge hub that serves as the project's ultimate source of truth.

Synthesized Answers

While the information can be massive for each project, you can synthesize knowledge in anyway you need.

Eliminates Tribal Knowledge

We no longer need to rely on solely to individuals who has deep knowledge about the brand and project.

Continuous Evolving Brain

As project continues, new information will be uploaded to the brain to stay up to date.

The “Project Master Brain”

Project Documentation:

- Scope, Business Documents, CX Strategy Documents
- Technical Requirements

Organizational Knowledge:

- Recorded and transcribed Webex Meeting Transcripts (capturing context and rationale)

Strategic Direction:

- Explicit feedback and knowledge from Associate Directors and Executive Leaders

Customer & Market Intelligence:

- Industry trends, competitor websites, and YouTube video transcripts of service comparisons.

Utilizing Multiple Master Brains

Project Master Brain example

The screenshot displays the 'FinPay's: Journey Reimagination' project within the Master Brain interface. The interface is divided into several sections:

- Sources:** A list of 17 sources on the left, including 'FinTech Market Trends 2025 | 2025...', 'User Research: Mobile Banking Habits', 'Competitor Analysis: Neobanks - Fi...', 'Regulatory Compliance Briefing - Fi...', 'Design System: FinPay UI Kit', 'API Documentation: Payment Gateway', and 'Stakeholder Interviews: Product Vision'. Each source has a checkmark indicating it is included.
- Chat:** A central chat window with the FinPay logo and the title 'FinPay: Journey Reimagination'. It notes '129 sources' and provides a summary: 'FinPay is reimagining the financial journey for modern users to drive financial wellness. Key initiatives include **Smart Budgeting**, **Instant Transfers**, and **Goal-Based Savings** to enhance financial control. Customers seek seamless and secure management over complexity.'
- Studio > Video Overview:** A video player showing a 'FinPay: Designer Briefing' video. The video title is 'Fin Pay: Designer Briefing' and it is 'Based on 120 sources'. The video content features three characters (two men and one woman) interacting with a futuristic interface. The interface includes a smartphone displaying '\$10,936.80', a tablet showing a line graph, and a laptop displaying a bar chart. The video player has a progress bar from 00:00 to 06:47.

Demo purpose only

Initiative Alignment Brief | Flex Pay

Brand: Straighttalk Total Wireless | CX Size: L

What is the Initiative?

This initiative implements the Flex Pay "Capital Light" solution for Straight Talk and Total Wireless. It empowers active single-line customers to pay a flat \$5.00 fee to extend their current due date by up to 5 days. This transaction permanently resets the customer's monthly billing date to the new chosen date, ensuring alignment with their income schedule without complex proration.

What customer needs are we solving?

Business: A significant volume of customers habitually enter suspension because their 30-day billing cycles do not match their paydays or Social Security (SSI) benefit cycles.

- Suspension Gap: Customers spend an average of 3.74 to 4.5 days in suspension each month.
- Foregone Revenue: This suspension period represents \$110M-\$113M in annual foregone revenue that could be recouped by keeping customers active.

Customer: Our competitors offer similar program to give customers flexibility. Here are the problems they are facing that we need to address:

- How might we provide 100% real-time visibility into the new permanent service end date and the status of the \$5 fee transaction to prevent budgeting confusion?
- How might we design the Flex Pay logic to ensure that a 5-day extension is viewed by the system as a "continuity event," thereby protecting the customer's AutoPay enrollment and existing promotions?
- How might we frame the \$5 flat fee not as a penalty for being late, but as a high-margin "flexibility-as-a-service" product that offers the customer control and peace of mind?

Status of Business Requirement

Demo purpose only

Initiative Alignment Brief | Flex Pay

Brand: Straighttalk | Total Wireless | CX Size: L

What is the Initiative?

This initiative implements the Flex Pay "Capital Light" solution for Straight Talk and Total Wireless. It empowers active single-line customers to pay a flat \$5.00 fee to extend their current due date by up to 5 days. This transaction permanently resets the customer's monthly billing date to the new chosen date, ensuring alignment with their income schedule without complex proration.

What customer needs are we solving?

Business: A significant volume of customers habitually enter suspension because their 30-day billing cycles do not match their paydays or Social Security (SS) benefit cycles.

- Suspension Gap: Customers spend an average of 3.74 to 4.5 days in suspension each month.
- Foregone Revenue: This suspension period represents \$110M-\$113M in annual foregone revenue that could be recouped by keeping customers active.

Customer: Our competitors offer similar program to give customers flexibility. Here are the problems they are facing that we need to address:

- How might we provide 100% real-time visibility into the new permanent service end date and the status of the \$5 fee transaction to prevent budgeting confusion?
- How might we design the Flex Pay logic to ensure that a 5-day extension is viewed by the system as a "continuity event," thereby protecting the customer's AutoPay enrollment and existing promotions?
- How might we frame the \$5 flat fee not as a penalty for being late, but as a high-margin "flexibility-as-a-service" product that offers the customer control and peace of mind?

Status of Business Requirement

The business requirements have been refined to a simplified "Capital Light" model to reduce build costs. However, a few critical decisions are still **pending**:

- **Tax Inclusivity:** A final decision is needed on whether the \$5 fee is "Tax Inclusive" or "Tax Plus". Finance warns that a tax-inclusive fee could result in negligible net revenue.
- **Service Characterization:** Legal/Tax teams must confirm if the fee qualifies as a "service fee" triggering 911 and statutory obligations.
- **VAS Contractual Liabilities:** Shifting third-party perks (Disney+, etc.) may create contractual liabilities with partners that must be reviewed.
- Decision **on the scope** to be finalized for the following scenarios:

• **Out of Scope (confirmed):** Customers with Glow financing. Finalize the approach for matching payments, services, and phone payments

Hi, I'm Sally! 🙌 I'm your Principal CX Strategist.

I'm here to audit your experience using the **Why/How/What** framework, grounded in behavioral science and ISO standards. I recommend we move through the **4 Phases of Experience**:

Phase 1: Strategy & Motivation (The Why)

- **[#01] JTBD & Value Matrix:** Analyzing User Value vs. Business Value.
- **[#02] Behavioral Science Audit:** Auditing for Ostrich Effect, Safe Searching, and Nudges.

Phase 2: Usability & Logic (The How)

- **[#03] Cognitive Load & Walkthrough:** Detecting Split Attention and Mental Model

Personal: Jayne

Case 2 User Goal

Case 2: Comprehensi...

AGENT ACTIVATION: SALLY 12.3 - PHASE 1 EXECUTION

Status: JTBD Aligned. Deep Audit in Progress.

Target Files: case2-all.pdf (Screens 1–11) vs. Jayne_Persona.

PHASE 1: STRATEGY & MOTIVATION (THE WHY)

Objective: Determine if the current flow aligns with Jayne’s psychological need for "Prepaid Freedom" and "Value," or if it triggers her "Contract/Fee Anxiety."

#01] JTBD Analysis: Progress vs. Anxiety

Verdict: CRITICAL FAILURE (High Anxiety Detected)

We defined Jayne’s Job: "When I sit down with the kit I bought, I want to activate it immediately without paying again."

The current UI creates a massive **Mental Model Mismatch**. It treats an Owner (who holds the product) like a Shopper (who needs to buy).

1. The "Double-Payment" Panic (Anxiety Spike)

- The Trigger:** On **Screen 11**, the header reads **"Cart 1 Item"** and displays a **"Order Total: \$65.00."**
- The Anxiety:** Jayne just paid \$65 at Walmart. Seeing a "Cart" with a price tag triggers her #1 pain point: *Hidden Fees*. Her internal monologue screams, *"Wait, do I have to pay this again? Did I buy the wrong thing?"*
- The Result:** She likely abandons the digital flow and calls customer support (High Cost to Serve) or

AGENT ACTIVATION: SALLY 12.3 - PRINCIPAL CX STRATEGIST (THE VISUAL SYSTEM EDITION)

1. IDENTITY & STRATEGIC ROLE

Name: Sally

Role: Principal CX Strategist & Behavioral Scientist.

Mission: You autonomously execute an **8-Step Deep Analysis** of UI/UX flows. You verify Strategy (Why), Logic (How), and Visuals (What). You act as a **Perfectionist**: you strictly execute a self-evaluation loop before every output to ensure "200-point" quality.

Frameworks:

- Layer 1 (Why):** JTBD (Progress vs. Anxiety), Cialdini's Nudges.
- Layer 2 (How):** Cognitive Walkthrough, Nielsen's Usability Heuristics, Ergonomics.
- Layer 3 (What):** Saliency Maps, Design Systems.

2. THE "MENU" PROTOCOL (ONBOARDING)

Sally Gem Instruction in Google Doc

Try:
How to configure the Gem

- Name: Sally ____ (put Sally's version) - Principal CX Strategist
- Instruction: Copy and paste the entire code block below into the "Instructions" field.
- Connect to NotebookLM (use + and choose "Resource for Sally")
<https://notebooklm.google.com/notebook/097df342>

Sally's Output: Slides Example 01

This is Case 1 of SUPER Sku project where user wants to activate their purchased plan on the purchased phone.

Use #08 to create a Strategic Summary Slides.

For Demo Only

Friction #1: Ability Blocker

REF: SCREEN [PAGE 5]
THE ISSUE: MANUAL DATA ENTRY

Context: User asked to "Enter Device MEID or IMEI".

Enter IMEI

35734489279867

Invalid Entry

High Friction

Reason: Violation of Fogg's Ability Principle. Humans cannot reliably type 15-digit strings on mobile without chunking or masking.

OPTION A: QUICK FIX
INPUT MASKING

Auto-format the input field as the user types (Groups of 4).

3573 - 4409 - ...

Why: Reduces cognitive load by allowing easier spot-checking.

OPTION B: THE STANDARD
CAMERA SCAN

Add a "Scan Barcode" button that opens the browser camera.

Scan Barcode

Why: Eliminates typing entirely. Reduces time-on-task by ~40%.

OPTION C: NORTH STAR
ZERO-UI (AUTO)

QR Code on the packaging pre-fills the data.

Why: Removes the step completely. Requires Supply Chain update.

VERIZON BUSINESS

Slide Output

Tips:
Turn on the 'canvas' feature in Gemini when asking #08 or #09 slide output

Sally's Output: Slides Example 02

This is Case 2 of SUPER Sku project where user wants to activate their purchased plan on the purchased phone.

Use #08 to create a Strategic Summary Slides.

FRICION CLUSTER 02:
IDENTITY

verizonvalue

CURRENT STATE

The Login Wall

Ref: PDF Screen 10

"Log in or create an account" acts as a hard barrier before checkout.

Impact: Friction. Jayne wants the reward (Service) before the labor (Password).

Strategic Solutions

OPTION A: QUICK FIX

Guest Checkout Link
Add a clear text link: "Continue as Guest." Remove the immediate barrier to sale.

OPTION B: STANDARD (RECOMMENDED)

Social / Wallet Login
Use "Continue with Google/Apple". Leverages existing trust and speed.

OPTION C: NORTH STAR

Deferred Creation
Complete the purchase first. Create the account **after** the "Success" screen to manage the line.

Slide Output

Tips:
Turn on the 'canvas' feature in Gemini when asking #08 or #09 slide output

Sally's Output: Slides Example 03: Full Report

Use #09 to create a Full Report Slides. Copy the entire output to Google doc and Use "Add files" feature to add the report doc. In this way, it saves the context memory and produce the better output.

EXECUTIVE SUMMARY

41 /100

Overall CX Score: FAIL

Verdict: Critical Strategic Failure.

The current flow creates an "Identity Crisis." It treats an **Owner** (who already holds the device) like a **Shopper**. This mismatch triggers "Double Payment Anxiety" at Screen 11, causing immediate abandonment.

Sally's Final Scorecard

Strategy (The Why) 20/100

● Critical: Solving for "Sales" instead of "Setup."

Logic (The How) 45/100

● High Friction: Heuristic violations (Recall vs Recognition).

Visuals (The What) 60/100

● Moderate: Price saliency overpowers Action.

With Sally, team will benefit from

Instant Self-Auditing

Empower designers to check their work anytime, bypassing the need for testing budgets or long lead times.

Scientific Consistency

Ensure every screen meets the same rigorous ISO & Behavioral Science standards, removing subjective bias.

Internal Validation

Catch friction early and validate designs internally, so you can present to stakeholders with confidence.

Gemini Gem

Notebook contains Edge Case Detection Resources

How Justin works

Justin's Output: Edge Cases in Sheet

ID	Layer	Context / Feature	The Trigger (User Action)	The "Invisible" Failure (Logic Gap)	Impact	Question for Product/Eng
1	1	Eligibility Gating	User is exactly on their Due Date (Day 0)	Docs say "before" or "mid-cycle". Is Day 0 "Active" or "Suspended"?	5	Does the offer vanish at 12:01 AM on the due date?
3	2	Flat Fee Engine	System calculates tax on the \$5 fee	Decision on "Tax Inclusive" vs "Tax Plus" is pending. UI cannot be finalized.	5	If "Tax Plus," does the \$5 button change to \$5.43 at checkout?
5	4	Temporal Logic	User is in PT, Server is in ET	User tries to pay at 10 PM PT on Dec 14, but server sees 1 AM ET Dec 15 (Suspended).	5	Which timezone dictates the "Active" status for eligibility?
7	2	API Timeout	Payment gateway hangs during \$5 charge	User is charged but Current_Due_Date attribute fails to update.	5	Is there a "Sync Check" to prevent the user from being suspended anyway?
13	1	Account Value	High-value plan (10 lines)	TW "Account-level" logic mentioned. Build is "Single Line" only.	5	How does the UI handle a 10-line user seeing a "Single Line Only" offer?
15	4	AutoPay Timing	AutoPay trigger is already "in flight"	User pays \$5 fee 1 day before due date, but AutoPay batching has already started.	5	Does the \$5 fee trigger an "AutoPay Cancel/Reschedule" API call?
18	4	Grace Period	User pays \$5 fee at 11:59 PM	Transaction finishes at 12:02 AM. System moves user to Suspension.	5	Is there a 10-minute "Payment Pending" buffer for the due date shift?
22	2	VAS Liability	Partner (Disney/Walmart) rejects date shift	Contractual liabilities mentioned. Partner says "No."	5	Does the whole Flex Pay transaction roll back/refund the \$5?
23	1	Legacy Plans	User is on a "Grandfathered" (Retired) Plan	Touching the bill_date attribute might force a plan migration logic.	5	Does shifting the date force the user onto a current (more expensive) plan?
24	2	AutoPay Lock	User acts 24h before due date	AutoPay batching often locks 24-48h prior. Flex Pay shifts date, but AutoPay draft still executes.	5	Will the user get double-billed (AutoPay + Flex Pay adjustment)?
33	3	Pending Actions	User has a "Downgrade" scheduled	User set plan to downgrade next month. Flex Pay shifts the "Next Month" date.	5	Does the pending plan change get cancelled or shifted?
39	4	Timezones	User is in Guam (UTC+10)	Day 0 in Guam is "Day -1" in US Eastern.	5	Does the system respect the Device time or Server time for eligibility?
41	2	GTS Latency	API takes 60 seconds to respond	User rage-clicks "Pay" 5 times.	5	Do we have a client-side "Debounce" (prevent double click) on the Pay button?
42	3	Suspension Edge	User enters flow 1 min before midnight	Transaction processes at 12:01 AM (Account technically Suspended). Express Pay assumes "saved payment". No "Update Card" flow in the 2-step mockup.	5	Does the system "Honor the entry time" or fail because status changed?
2	1	Payment Input	User has an expired Credit Card on file		4	Does the \$5 transaction trigger a full "Add New Card" workflow?

[WDS Gem](#)

Understand BMAD and WDS

Watch this video to gain understanding of BMAD and WDS.

Understand BMAD

BMAD

BMAD (Breakthrough Method of Agile AI Driven Development) is a structured framework that replaces unstructured AI prompting ("vibe coding") with a rigorous, agent-led process where detailed specifications serve as the "new code" to ensure consistent, high-quality software delivery.

Mary (Analyst)

Uncovers hidden requirements and conducts market research.

John (Product Manager)

Creates detailed Product Requirements Documents (PRDs).

Winston (Architect)

Designs system architecture, technology stacks, and data flows.

Sarah (Product Owner):

Manages the backlog, prioritizes features, and bridges stakeholders.

Bob (Scrum Master)

Facilitates sprints, removes blockers, and breaks epics into stories.

Amelia (Developer)

Writes production-grade code, unit tests, and documentation.

Quinn (QA Engineer)

Runs quality gates, risk assessments, and automated testing.

Sally (UX Expert)

Represents user advocacy within the engineering cycle

Clara (UX Writer)

Ensure that digital products use language that is clear, accessible, and aligned with a specific brand voice

Understand WDS

WDS (Whiteport Design Studio)

WDS is a specialized strategic design module built on top of the BMAD framework. **While BMAD focuses on engineering, WDS focuses on Strategic Design,** using AI agents to translate business goals into "Conceptual Specifications"—design documents so logical and detailed that they act as perfect blueprints for development.

WDS uses a specialized team of agents, metaphorically named after Norse gods, focused entirely on Strategic Design, bridging the gap between business goals and technical development.

Meet WDS Team

Mimir Orchestrator

The wise guide and coach. Mimir greets you, assesses your experience level, helps set up the project, and routes you to the correct specialist agent.

Saga Analyst

The strategic thinker. Saga handles the Product Brief and Trigger Mapping. She connects business goals to user psychology to ensure the product solves the right problems.

Freya Designer

The UX/UI specialist. Freya (sometimes referenced as Freyja) converts strategy into Usage Scenarios, interaction flows, and "Conceptual Specifications." She defines how it works & why.

Idunn Architect/PM

The bridge to engineering. Idunn translates design concepts into Platform Architecture and technical requirements (PRDs) that developers can actually use.

Eira Visual Designer

A recently added agent who integrates with image generation tools (like Nano Banana) to create visual concepts, brand explorations, and design tokens.

How WDS works

Example of how WDS Team helped design team

Watch this video for understanding how design team used the WDS Team Gem to craft the strategy

Prototype Example with WDS

With WDS Gem, you can create interactive prototypes with detail prompts based on deep strategic thinking you led with the agents.

Gemini

apply these design system tokens to the prototype

AI Solution

Pro Tips

Bridging Design and Code for Higher Fidelity

Did you know you can extract the actual code components from your Figma Design System and feed them directly into Figma Make or Gemini Canvas?

By grounding the AI in design system in code, it generates prototypes that inherently obey our design tokens and constraints. The result is higher fidelity from the very first prompt.

Add hoc StraightTalk Design Systems in Code

Create a Google Slide with Gemini Canvas

Did you know you can create an editable Google Slides from Gemini?

Unlike NotebookLM's slide feature which produces Non editable slide, Gemini can produce a slide in the Canvas, then, you can export.

The screenshot displays the Gemini Canvas interface, which is used to generate and edit Google Slides. On the left, a sidebar shows a list of documents, including 'Copy of In... - Flex Pay' and 'Verizon Bu...'. A chat window is open, showing a prompt: 'use canvas and turn this initiative alignment brief into a slide with verizon business template design direction.' Below the chat, a 'Generating slides ...' status is shown. The main area displays a Google Slide titled 'Flex Pay Initiative Alignment Brief'. The slide content includes the title 'The Business Case: Recouping Revenue', a large red '\$113M' with 'ANNUAL FOREGONE REVENUE' underneath, and a section titled 'The Suspension Gap' with a 'Key Data Point' stating: 'Customers spend an average of 3.74 to 4.5 days in suspension each month. Flex Pay aims to bridge this gap.'

Create a 50 variations of prototype at once

We can ask the model to generate 20, 30, or even 40 variations of a flow simultaneously. We simply specify the constraint—'Show me 40 different ways to solve for X'—and the system produces a gallery of options. This allows us to separate ideation from execution, letting designers review a massive range of architectural approaches before committing to pixel-perfect design.

Tip

Connect Gemini to NotebookLM

You can now connect your
Gemini to NotebookLM.

Tip Generate Storyboard Contents

You can generate storyboard ideas, microcopy, and captions.

In this example, Gemini created

- Storyboard frame flow
- Description of each frame
- Caption of each frame
- UI Elements of each UI screen

Then, in you can create images (illustration and UI using other Gems)

Frame No.	Phase Title	Frame Type	Content Focus / Description	UI Elements and Purpose (Design Intent & Components)	Caption (Focusing on Action/Result)
F8 (Shifted)	P5: Data Collection & Port Setup	UI Screen	AI-Powered Bill Extraction: Guide Judy through the process of uploading her bill, with AI handling the extraction of critical porting data.	animation. Content: Headline: "Upload Your Bill for Instant Data Extraction". UI: Camera/file upload buttons. Processing: Loading spinner/animation with "AI is processing your bill...". Post-success: Transition to confirmation with pre-filled info and "Confirm & Submit" CTA. Interaction: Customer takes photo/uploads file, initiating AI processing.	Judy uploads a photo of her T-Mobile bill, and the AI efficiently processes it to extract all necessary porting details.
F9 (Shifted)	P6: Port Submission & Status Tracker	UI Screen	Port Request Submission & Transparency: Confirm that the porting request has been sent, and immediately show the Glass Box Tracker for real-time status and reassurance.	Screen Type: Port Request Confirmation & Initial Tracker Header: "5 of 6: Porting Your Number" (progress bar). Layout: Confirmation message top, Glass Box Tracker center. Content: Headline: "Port Request Submitted". Reassurance: "Don't worry, Judy, you will not lose service during this process...". Glass Box Tracker (initial): "1. Port Request Submitted" checked, "2. Carrier Validation" progressing, "3. Number Switch" pending. Message: "Estimated completion: 15-30 minutes." Interaction: None (information display).	The porting request is successfully submitted, and the Glass Box Tracker provides immediate assurance with an estimated completion time.
F10 (New)	P6: Port Submission & Status Tracker	UI Screen	Waiting for pSIM & Porting Progress: Show the porting process actively continuing in the background while clearly indicating that the final step (physical SIM swap) is pending pSIM arrival. This is the waiting	Screen Type: Porting Tracker - Awaiting pSIM Arrival Header: "Your Number Transfer is Progressing" (with progress bar). Layout: Glass Box Tracker, pSIM status prominently displayed. Content: Glass Box Tracker shows "Port Request Submitted" & "Carrier Validation" as complete/progressing. "3. Number Switch" might be shown as "Pending pSIM Activation". Prominent message: "Your number transfer is underway! Your pSIM kit is shipping and expected by [Date]." Sub-message: "We'll notify you via SMS when your pSIM arrives and it's time for the final step." Interaction: None (information display, waiting)	The Glass Box Tracker shows the number transfer progressing, while Judy awaits her pSIM delivery for the final
